

WHERE DO MEDICINES COME FROM?

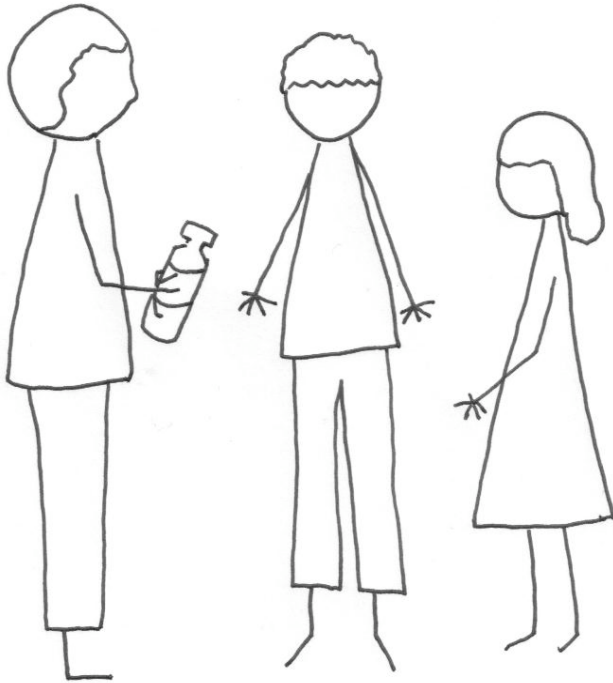

The pharmacist
gives you the
medicine and tells
you how to use it.

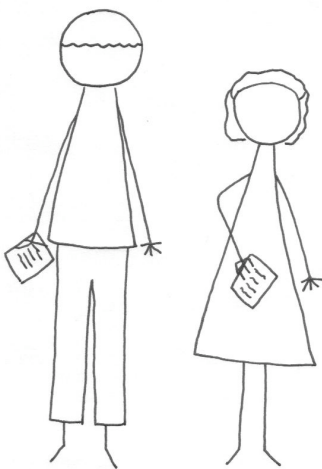

Medicines
are made in
big factories.

Scientists make new chemicals, use computers and even look at living things when they try to find new medicines.

Doctors try out new medicines on patients to see if they work.

When a new medicine is ready, doctors can use it to make people better.

Big lorries carry
the medicine
from the factory
to the pharmacy.

Scientists test new
medicines to see if they
work and if they are safe.
