

8th May 2026

Dear Parents / Carers,

RE: HPV Vaccine Awareness Campaign

Vaccination UK, your in-school vaccination provider, working with RM Partners NHS Cancer Alliance, is launching this year's HPV vaccine awareness campaign to support delivery of the HPV vaccination programme across Harrow.

The campaign aims to increase understanding of the HPV vaccine for pupils, parents, school staff and the wider community to encourage uptake at the age when it offers the strongest protection against HPV-related cancers. The more children who get the HPV vaccine the more futures are protected against cancer.

Why it matters

- The HPV virus causes **10,000 cancers each year in the UK.**
- Vaccination in schools provides the **best opportunity for lifelong protection.**

To support our campaign, we are offering Clinically led HPV Vaccine Information Webinars for parents and carers to answer questions. Click [HERE](#) to be directed to an information leaflet to register for your **free** place. We will also support your school to prepare for your vaccination day and raise awareness in your school community.

Our shared goal

- **Protect** all students **at the age of 12-13 years**, when vaccination is most effective.
- Increase uptake to **90% by 2027**, achieving herd immunity and long-term cancer prevention.

Through this package of support, we are aiming to encourage uptake, and give all eligible students access to the vaccine.

Yours faithfully,

Vaccination UK
